U.S. AIR FORCE

Why a Utility Allowance (UA)?

- **Basic Allowance for Housing (BAH) includes two components: one for rent, and one for utilities**
- **Department of Defense policy on Utility Allowance is to:**
 - **Encourage conservation by making residents responsible for their energy consumption (electricity and natural gas)**
 - **Reward Service members who conserve utilities to keep the difference between the cost of their consumption and the UA**
 - **Provide Services with the flexibility to adjust the UA based on actual consumption data and experience with the initial methodology**
 - **Conservation of utilities lowers demand on the grid increasing the resilience of the system to support mission requirements**

Air Force UA Program Overview

The UA Program is an [OSD mandated program](#) that provides the privatized military partners the opportunity to participate.

The UA Program's baseline calculations use [current weather conditions](#) vs. the previous model that took an average of the year's overall conditions.

[3 months of mock billing](#) will be provided to allow residents an adjustment period to get familiar with the program.

Utility baselines are calculated based on the [current month's weather conditions](#) as well as the commodity rate.

Under LIVE billing, [most Airmen will likely experience no out-of-pocket expenses](#). The utility component of the BAH should cover utility costs for the majority of household's who consume "normal" or average usage. Those with above normal usage will only owe if the payment is above the \$50 threshold.

Benefits of the New UA Program for Residents

Accurately calculates energy costs

- Based on monthly averages, and current utility rates to account for seasonal impacts and real-time costs
- Increases Airmen transparency

Promotes energy conservation

- Offers rebate incentive to those who conserve electricity & gas beyond the normal usage range
- 50% of residents will receive rebates for conserving
- Zero out-of-pocket costs for the average utility consumer

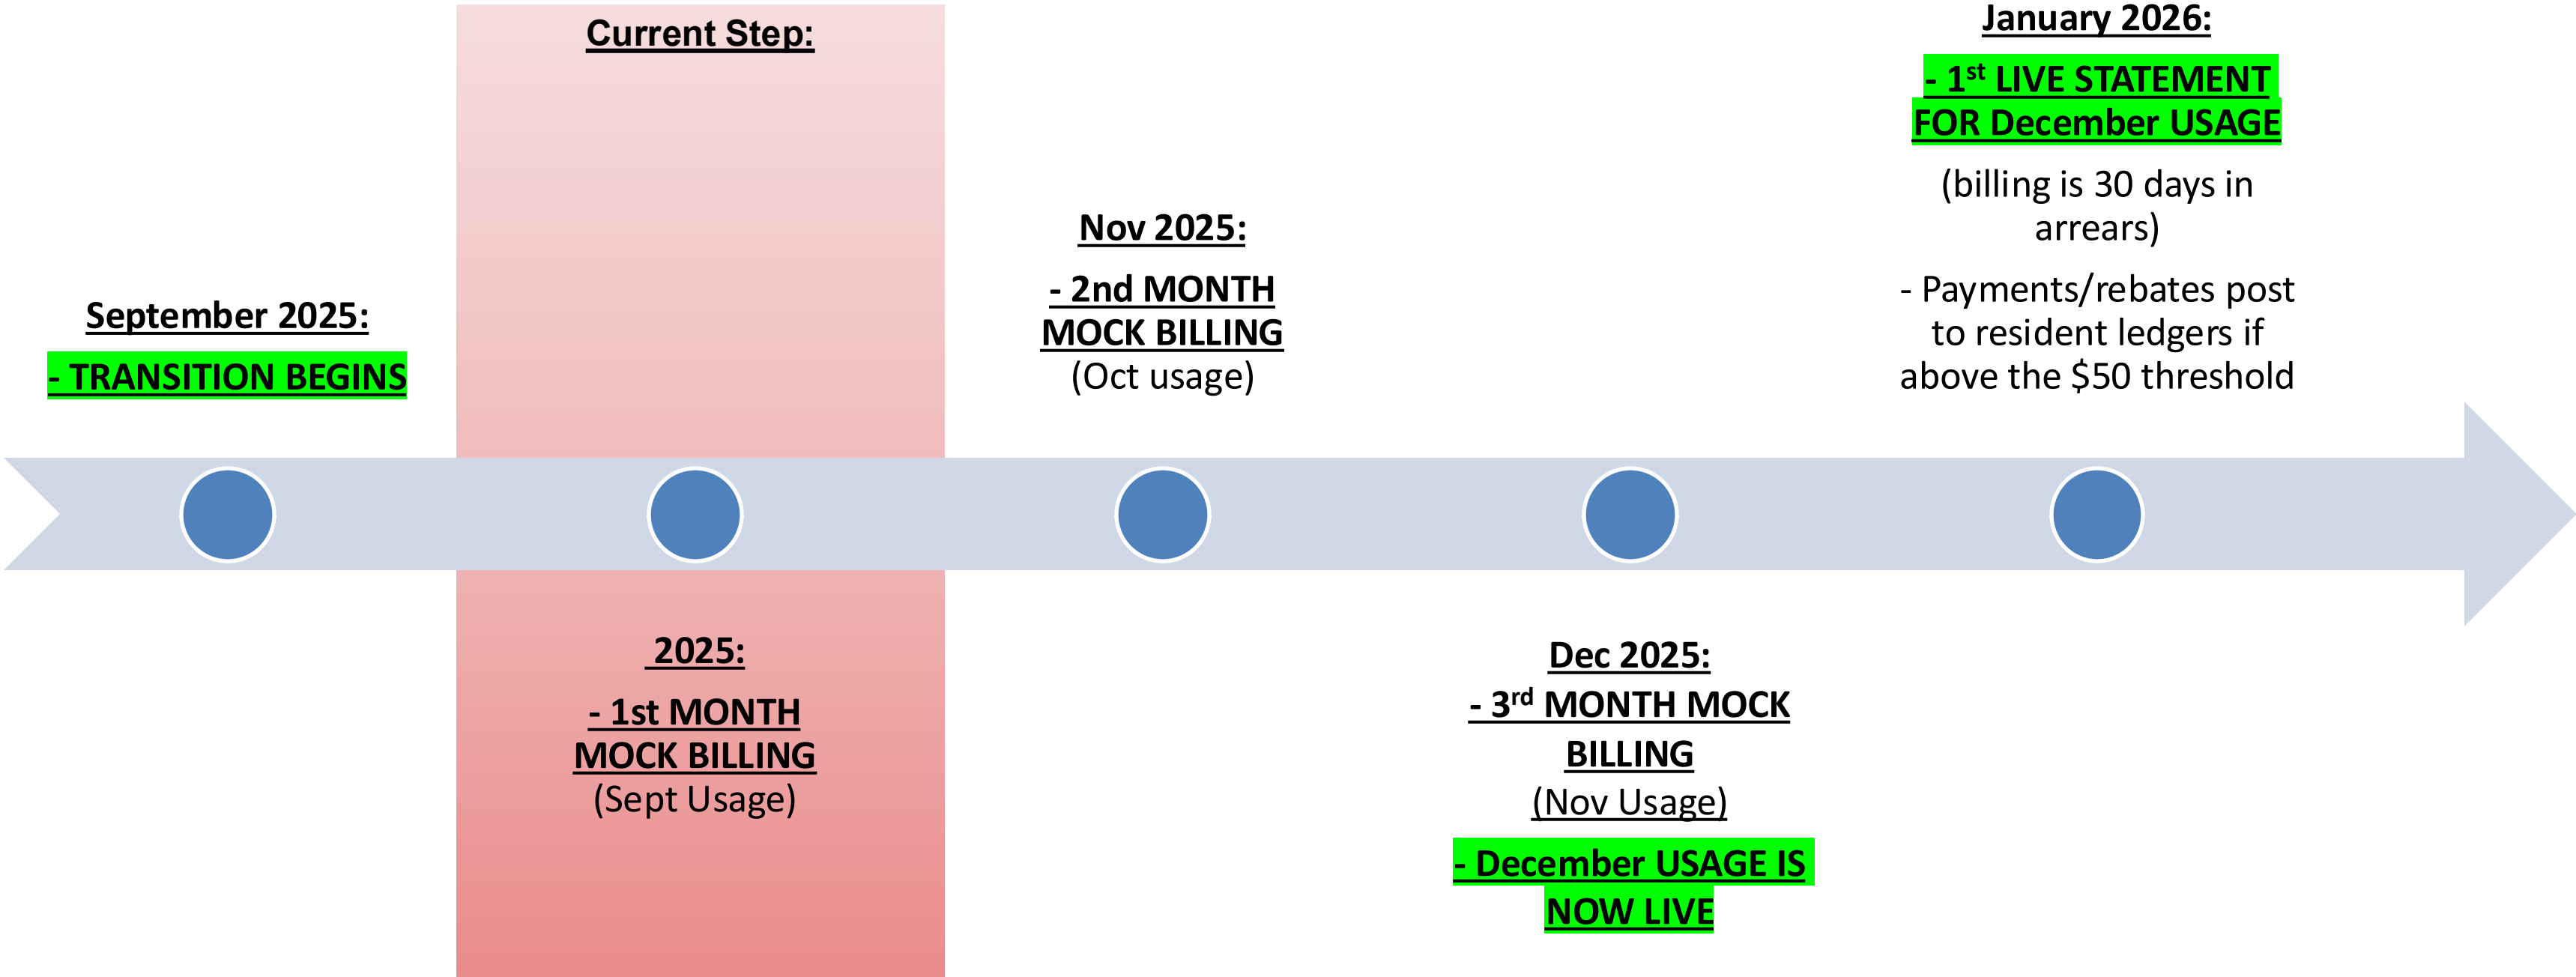

Allows more project funds to be reinvested in homes and communities

- Balances financial incentives to residents and helps reduce project operating expenses
- Encourages Project Owner investment in energy-saving initiatives

Air Force UA Program

	Air Force UA Policy
Energy Calculation	100% of the actual average monthly consumption of like-type homes.
Payments	Residents pay out-of-pocket only for above average usage (over the \$50 payment threshold).
Rebates	Residents earn rebates for usage below the average (over the \$50 rebate threshold).
Seasonal Fluctuation Calculations	UA accurately captures cost, including seasonal fluctuations monthly.
Rate Fluctuations	UA accurately captures rates updated monthly.
Impact on Airmen	Residents using above average consumption will pay the difference out of pocket if above the \$50 threshold. Residents using average consumption will pay \$0 out of pocket.

Air Force UA Transition Milestones

IMPORTANT NOTE:

YES Energy UA billing statements will always be delivered ~30 days after the usage period has closed.

Active-Duty residents with Colquitt electric accounts are required to sign a release form by 7/30. Accounts will be transferred to Hunt.

This is due to the time needed by the 3rd Party Billing Company to receive the meter and cost data from the Utility Provider and calculate the UA baseline averages for each LTG, along with, payment and rebate allocations.

Air Force UA Transition Milestones – (Continue) Colquitt Electric Accounts

Active Duty Residents:

- All Active-Duty residents are required to sign a release form allowing Colquitt Electric to transfer electric accounts to Hunt. Forms must be submitted to Hunt by 7/31.
- The RECP Program requires Hunt to have all commodity services in the projects name to bill RECP.
- This is a Colquitt Electric requirement to sign a release form to transfer accounts under Hunt.
- Primary account holder is required to sign the release. Should match the name on the utility bill.
- If primary account holder is currently deployed, a signed Power of Attorney is acceptable. Name on release form must match name on POA.

Civilians:

- Civilians are not eligible for the RECP program
 - Not required to sign release form
 - Will continue to have electric account setup with Colquitt electric and pay them directly for service.

How are LTG's Determined?

Like Type Groups:

- Homes are grouped together in “**Like Type Groups**” (LTGs) based on factors that influence energy usage including:
 - Size (sqftg, number of bedrooms)
 - Age of the home (year built)
 - Construction style and thermal characteristics
 - Variations in type of heating and cooling equipment
- *****Family size is not a factor*****

Small Like Type Groups:

- For small groups with fewer than 10 homes or unique homes, the baseline average will be determined using:
 - 5 Year Rolling Average Method
 - Per Square Foot Method

The Billing Process

How Are Payments & Credits Determined?

- **Establish the normal usage band for every like-type group by commodity:**
 - Remove Exclusions: Vacant/Partially Occupied Homes, Estimates, Homes with Electric Vehicles, and Civilians
 - Eliminate the Highest 10% and Lowest 10% of Users (If >10 homes in a LTG)
- **Compare against the normal usage band:**
 - Rebate Issued: If your usage is BELOW the normal usage band, you will be eligible for a credit
 - Payment Due: If your usage is ABOVE the normal usage band, you will need to pay for the extra usage
- **Apply the \$50 Threshold:**
 - Payments/Rebates BELOW the \$50 Threshold: NO ACTION (unless the cumulative balance exceeds the threshold)
 - Payments/Rebates ABOVE the \$50 Threshold: PAYMENT DUE or REBATE ISSUED
 - At the Baseline: If your usage falls equal to the normal average usage amount, you will owe nothing (covered by BAH)

Sample Bill Calculation

Example Billing Calculation for Usage BELOW the Normal Average Usage Band:

Resident's Actual Monthly Usage = 750 kWh

Monthly LTG Average = 1000 kWh

Difference between resident's usage and the normal average usage band:

$$750 \text{ kWh} - 1000 \text{ kWh} = (250 \text{ kWh})$$

Billing amount is calculated by applying the current effective electric rate to determine the charges for usage below the buffer:

$$(250 \text{ kWh}) \times \$0.14326/\text{kWh} = \boxed{\text{(\$35.82) REBATE}}$$

Payment owed when total payment amount exceeds >\$50

-OR-

Rebate issued when total rebate amount exceeds > \$50

Energy Assessment Checklist

Welcome to the Hunt Energy Assessment Checklist! This easy-to-use tool is designed to help you evaluate your home's energy usage and identify opportunities for improvement. By completing this assessment, you'll gain valuable insights into how you can enhance your energy efficiency and potentially reduce your costs.

Taking just 10-15 minutes to complete this assessment can lead to significant long-term benefits for both your wallet and the planet. Ready to get started?

[CLICK HERE TO BEGIN YOUR ENERGY ASSESSMENT!](#)

Videos

Below are brief videos showing an overview of how monthly utility services will be billed for active duty residents under the UA Program & best practices for conserving energy and reducing your household's utility bills.

YES Energy Resident Billing Service

Hunt Military Communities has partnered with YES Energy, a leading energy and metering company, for the administration of the resident utility conservation program.

Account Payments

A variety of convenient payment options including automatic payments available on the Hunt Resident Portal.

Statements and Notices

The new and improved monthly statements are now be easier to read and understand. Statements will continue to be mailed to your home each month and will also be available electronically in your YES online web portal.

Customer Assistance- Available Now!

Contact the YES Customer Service Center for help managing your utility account. We have a dedicated group of employees standing by to help you with any questions you have regarding this transition or your utility account.

Reach this team by phone 24/7 at 1-888-363-0493

SAMPLE STATEMENT FRONT

The top portion of the statement is the tear-off stub with payment details.

Legend stating if there is an amount to pay, nothing to pay, or if a refund is due.

The left hand side contains:

- Customer service contact details.
- Portal website address.
- Community name.
- Resident ID and portal registration code.

Electric Conservation Tips

Ten percent of the average US household's electric use is caused by unused electronics that are plugged into the wall. Here are some tips for conserving electricity in your home and managing unused electronics, commonly referred to as "Vampire Loads".

LIGHTING

- If left on constantly, an LED light could last for up to 50,000 hours, or 6 years, which is 50 times longer than a regular 60-watt incandescent bulb.
- Bathroom vanity lights are one of the most used fixtures in the average home. Use energy-efficient lighting, which can provide bright, warm light while using less energy and generating less heat than standard bulbs.
- Choose light colors for furniture. Light colors reflect light. Dark colors absorb light and require higher bulb wattages.
- Clean lighting fixtures regularly. Dust on lamps, reflectors, and light bulbs impair lighting efficiency.

ONE MISSION. ONE COMMUNITY.

Home Energy Assessment Checklist Resident Version

Item Description	Heating/Cooling System			Comments
	Yes	No	NA	
Are A/C thermostats set at 76-78 degrees or heat thermostats set at 68-72 degrees?				Each degree of heating or cooling can cost an additional four to five percent in energy costs.
Are fans (ceiling/portable) used to circulate air flow?				If resident chooses to purchase and install ceiling fans, alterations request must be approved by the housing office.
Are your ceiling fan(s) adjusted for the season?				Counter clockwise in cooling season to cool home, clockwise in heating season to force warm air from ceiling.
Is there a draft in the room?				Contact the Maintenance Dept. and submit a work order request indicating the location of the draft.
Do you adjust your thermostat in evenings/mornings?				Recommend adjusting 5-10 degrees.
Are the dampers adjusted correctly per season?				If unknown, contact the Maintenance Dept.
Do you adjust your thermostat when taking long trips?				Heating not lower than 50 degrees due to pipes possibly freezing, cooling no higher than 85 degrees.
Is the exterior of HVAC clean, no debris blocking air flow?				Do not attempt to clean, contact the Maintenance Dept.
Are the HVAC lines insulated?				If not, contact the Maintenance Dept.
Are front/back/garage doors &/or windows left open while A/C or heater are working?				Recommend home is closed up when either appliance is active.
Are vents in low traffic areas partially/fully closed to help push air to high traffic areas?				Example - If your family rarely uses the dining room area, it may be a good idea to close or partially close the vent which will in turn push the air flow into other parts of the home.
Are the air outlets/vents free of obstructions?				Example - Please make sure no furniture is obstructing the vent.
Are windows open during spring/fall rather than using heating/cooling system?				In historic homes, at least one window per room should be operational. Contact the Maintenance Dept. & submit a work order request.
During heating season, are blinds/curtains open in day and closed at night?				Allowing sunlight in during the day helps with heating and closing them at night blocks cold air.
During cooling season, are curtains closed in day and open at night?				Preventing sunlight in during the day helps with cooling and opening them at night allows cooler air.
Do you have heat producing electronics/appliances located near thermostat(s)?				Don't place lamps or TV sets near your thermostat. The thermostat senses heat from these appliances, which can cause the air conditioner to run longer than necessary.
Are air filters replaced monthly?				Filters are available at the Maintenance Dept. on Warehouse Rd.

Suggestions:

- To select ideal temperature, increase/decrease thermostat by 2 degrees every day until perfect temperature.
- When entertaining larger groups, adjust thermostat 3-5 degrees lower. The more people there are, the more warm the room(s) will be.
- When adjusting the thermostat, remember that the house will not warm up or cool down any faster if you crank up the thermostat past the desired temperature.

Page 1 of 9

Energy Conservation Tips

Lighting

- Replace incandescent bulbs with LEDs where possible. If left on constantly, an LED light could last for up to 50,000 hours, or 6 years, which is 50 times longer than a regular 60-watt incandescent bulb.
- Clean lighting fixtures regularly. Dust on lamps, reflectors, and light bulbs impair lighting efficiency.

Heating/Cooling

- Leave window shades, drapes and/or blinds closed during the day
- Replace filters more frequently if there are pets in the home.
- Use ceiling fans. Also run kitchen and bath exhaust fans long enough.
- Open windows during moderate weather of spring and fall

Electronics

- Unplug infrequently or seasonally used power supplies
- Buy ENERGY STAR®-labeled electronics. Consolidate multiple power supplies on a single power strip

Appliances

- Gas flames from your stove should burn with a clear blue color. A yellow flame may indicate your burner isn't operating efficiently.
- Carefully time your preheat period when baking.
- Defrost the freezer regularly.
- Wash clothes in cold water whenever possible.
